

Sustainable agility

Sustainable solutions for improving and maintaining
production competitiveness

Agile operations and ways of thinking

We help our clients to focus on their core business

EMPOWER

Empower is a multinational service company delivering construction, maintenance and expert services in the energy, telecommunications and industry sectors.

Combining competence

Empower is a significant service provider whose services cover expert services, design, project deliveries, construction and maintenance. Our services also include energy market services with related IT solutions. Our principal clients are energy companies, telecom operators, industrial enterprises, public corporations and equipment suppliers in the Baltic Sea region.

A professional staff, the geographical coverage of our operations and flexible resources combined with comprehensive solutions are our strengths. Solid references and our continuously developing working methods guarantee that the client receives a high-quality package that optimises the use of resources.

Agile and flexible

Empower adapts to new situations in a quick and agile way. Agility is our promise to clients – this challenges all Empower employees to follow this promise.

Our operating method is rooted in perseverance and our objective is to produce sustainable solutions. We help clients in the design and implementation of ecologically sustainable solutions. In all service packages, such as those for a wind power plant manufacturer, an electrical network company or a telecom operator, we take into account the product life cycle at all stages of the service delivery.

Enabling change

We help our clients to focus on their core business. We commit to cost-effective solutions through which clients can enable change in their business. We take a responsible role in all client changes.

Our industry services are based on networking

- Local service production
 - Maintenance and operation services
- Mobile service production
 - Shutdown services, projects and special services
- Centralised service production
 - Project engineering and expert services
 - ICT: systems, data management, control rooms
 - Maintenance service centres, logistics
