

Balance management

The volatility of electricity prices is a major risk for energy market operators. At Empower IM we possess the readiness to carry out balance management services for you when it is necessary, around the clock, optimizing your business outcome of market fluctuations.

- **PRODUCT GROUP:** Energy market services
- **SERVICE TYPE:** Continuous service 24/7
- **ASSOCIATED SERVICES:** Electricity procurement planning, trading in the Elbas and regulating power markets

Operating environment

As a participant in the electricity market you need to prepare for changes in your power balance. Any unexpected events in the market or transmission network may require balance management measures on your part. The volatility of electricity prices can have significant unforeseeable effects on your costs.

This balance risk can be reduced through the active monitoring of the procurement and consumption/production of electricity, updating forecasts and taking other corrective actions. Closely monitoring and acting upon the development of the power balance as delivery time approaches will reduce risks and secure the best business outcome.

Our 24/7 service

Empower IM has vast operating experience in the Nordic energy market. Our control room is operating 24 hours a day, 7 days a week. We have the readiness to act as your extended arm and carry out balance management services around the clock.

The balance management service is used to monitor the development of your electricity procurement and consumption, and to update related forecasts. Depending on the site and your specific instructions, forecasts can be updated on the basis of parameterised calculation algorithms or actions taken by the control room operator. If measures lead to trading on different marketplaces our actions are always based on your trading principles.

Why choose Empower IM?

No matter what your size, balance management is best done around the clock. We offer to do this as your trustworthy partner, in your name and based on your principles. Usually, this service comprises part of a larger service package. Just like Empower IM's other services, what our control room has to offer can be customized according to your specific needs.

Letting us help you optimise your balance management will reduce your balance risk to a minimum. When participating in the various electricity marketplaces Empower IM is purely a service provider acting on behalf of customers, never a trading partner. We are the only completely neutral player on the Nordic market.

Contact us, we will be happy to help
